

Observed outputs in six matched records

An observed output is not evidence of correctness or sufficiency

Candidate	Text X_T	+ layout X_{TL}	+ pixels X_{TLV}
Diagram	No output observed	Output observed [†] horizontal; vertical	Output observed horizontal; vertical
Chart	No output observed	No output observed	Output observed [†] commitment; 7.906 million USD

[†] Earliest non-empty cell in the displayed sequence; this mark is descriptive, not a sufficiency threshold.

Two candidates $\times$ three matched packages = six records from one fixed system; correctness and effectiveness were not measured.
